

Once the last associated action (the submission of extended papers for the IEEE/OSA JLT especial Issue on OFS23) has been closed, it is time to share with the international fiber sensing community the main relevant topics and data concerning the recent 23rd International Conference on Optical Fiber Sensors, OFS23, in Santander, Cantabria (Spain).

By publishing this OFS23 Final Report (PDF link) we are trying to keep the community informed and also to supply data to enable you to reach your own conclusions.

By the way, it is my pleasure to inform you that 101 extended versions of papers presented at OFS23 have been submitted. After the review process, and according to the JLT high quality standards, it is expected that around 55%-60% of the submitted papers will be included in the mentioned special issue.

Finally, we would like to invite you to enjoy the memories of your participation in the conference with the uploaded photos and videos, and to also visit the News section.
